Lamboo LVB Showcased at the International Builder's Show 2010

Lamboo, Inc. Partners With Multiple Companies at Builders Show in Las Vegas

SPRINGFIELD –

After Lamboo's debut in November, at the AIA Minnesota Conference and a presentation to the WDMA (Window and Door Manufacturers Association) in December, the Lamboo LVB (Laminated Veneer Bamboo) Window and Door Components were showcased through Pacific Architectural Millwork in the first ever bamboo curtain wall storefront system at the International Builders Show 2010 in Las Vegas. With Lamboo LVB Materials structural properties, aesthetic appeal and workability, it has gained ground in the industry. The Lamboo LVB technology's integration into a window or door system attains higher uniformity and mechanical consistency while achieving contemporary aesthetic qualities for today's innovative architects and designers.

"This is a very unique material for really green projects," said Pacific's Ryan Higman, who added that "the product is 20 percent more stable than wood. He also said that processing Lamboo takes 300 percent less energy than steel and aluminum production." US Glass News Network

Lamboo LVB was also seen on the table of Kolbe Windows and Doors in production of their commercial grade Lamboo window. Lamboo material is an alternative species selection for their already innovative designed windows. Kolbe & Kolbe showcased corner samples at the International Builders Show 2010.

Bamboo is the most renewable resource on the planet and with Lamboo's new technology we are able to bring it to the forefront of the sustainable design industry. Lamboo, Inc. is devoted to making a difference in the environment by using more eco friendly, longer lasting products and practices. With the infrastructure in place and their efforts to remain an innovative company, Lamboo will be as sustainable as its products.
