LAMBOO, INC. PRESIDENT LUKE SCHUETTE NAMED TO CHAIRMAN FOR ASTM

American Society for Testing and Materials Recognizes Value of Sustainable Product

Springfield -

Luke Schuette Lamboo, Inc. President, was named a chairman for the board of Renewable Products for the American Society of Testing and Materials and is leading the initiative to create engineered bamboo standards for the world to follow. The ASTM has had standards for wood, steel, and aluminum but not bamboo. ASTM has designated an entirely new standard number ASTM D07.02.03 to establish standards to be set forth, for the future use of engineered bamboo as a structural material.

“This is a great honor and opportunity to be part of this organization. The standards set forth by the committee will shape the way the architectural, engineering and construction industries use green products. These standards could affect all LEED certified projects and buildings from this day forward” said Luke Schuette President Lamboo, Inc.

With deforestation, habitat destruction and air pollution on the rise, bamboo as a renewable resource offers great opportunities and uses to this planet. With innovation, economic and environmental responsibility Lamboo is working hard to make itself as sustainable as its products.
