FIRST BAMBOO WINDOW SHOWCASED AT A.I.A CONFERENCE

Lamboo, Inc. and H- Window Company Partnered to Debut First Lamboo Window

The most renewable resource on the planet just got better. Bamboo is not just a food, clothing, accessory or flooring anymore. Lamboo Technology Division has developed a new structural grade, low V.O.C., window and door material. Through sourcing, manufacturing and product specifications this material has anti-microbial and moisture resistant attributes that make this ideal in high use, ultra clean environments such as hospitals, schools and restaurants.

H-Window Company built the very first Lamboo finish grade window with their most popular series, the 204 Awning Window. This 204 awning system is ideal for residential and commercial uses, with their Spilka push-bar operating hardware and hinge system, one of their most innovative and revolutionary windows became even more innovative. This window was showcased at the American Institute of Architects Minnesota Conference November 10 – 12, 2009.

President of Lamboo, Inc. Luke Schuette said “due to the structural and thermal properties of Lamboo as well as its aesthetic appeal, it is a great fit for the window and door industry. Our business is bamboo, H-Windows is windows, it made sense to join together to bring you a sustainable revolutionary window and door system”.

The H- Window awning with its double or triple paned glass system and solid Lamboo interior is eligible for up to 19 LEED points. Leadership in Energy and Environmental Design is one of the most nationally recognizable Green Building certification systems created by USGBC.

Lamboo, Inc. is devoted to making a difference in the environment by using more eco friendly, longer lasting products and practices. With the infrastructure in place and their efforts to remain an innovative company, Lamboo will be as sustainable as its products.
